

SAM Inventory Baseline

Complete Overview of Installed Software

Start saving on your software license cost now and find out how LicenseWatch can help you. LicenseWatch is the only provider of Software Asset Management solutions that can effectively help organizations fast and easy and cost effective.

ABOUT LICENSEWATCH

LicenseWatch provides you with cost effective control and compliance.

KNOW WHAT YOU HAVE

Our leading technology quickly can tell you what software you have installed and how it is used, and what licenses you have to support this.

AVOIDING RISK

Knowing what is installed where eliminates non-compliance risks and minimizes impact on your organization when under audit or review.

QUICK TO IMPLEMENT

No installation required. Just providing access to Active Directory lets the service deliver an inventory report remotely.

SERVICES AVAILABLE

SAM Readiness Service
Installation and Setup
Maintenance
Software Recognition Service
Technical Support
Guaranteed Warranty

Audits can cause serious impact

The trend is that Software Vendors are going to do more audits. If you have not yet experienced one, chances are big you can expect one the next 12 months. Audits can cause serious impact on organizations. Scarce IT resources need to spend time helping to find out what is exactly installed on the complete network. The financial implications of possible exposed non-compliance can cause serious budget issues to correct.

Full report of all commercial software

Without the need of buying and implementing a full Software Asset Management solution, the LicenseWatch SAM Inventory Baseline is a service that delivers customers with a full report of all commercial software that is installed in the network.

No need to install any software

No need to install any software on your computers and within 30 days a full report will be delivered. The SAM Inventory Baseline service gives ease of mind and removes stress from organizations when under review or audit.

Features and Benefits

With SAM Inventory Baseline service, LicenseWatch customers within 30 days will have a complete overview what commercial software is installed where. In the 30 day period the service will be able to provide a full inventory on all Windows computers on the network. Then the LicenseWatch team compiles information gathered into a com-

prehensive report that can be used in the first step of a full SAM implementation or as an inventory report for Software Vendors.

Deliverables

The deliverables from the Sam Inventory Baseline service are two reports giving a detailed view of what software is installed on what computer. These reports allow customers to look at the data from the following points of view:

- List of all workstations and what computers is installed
- List of all software titles and on what computers it is found
- Inventory report of software titles and on how many computers it is found

The data will be cleaned and normalized using the LicenseWatch Software DNA.

Contact us

Contact your local LicenseWatch office or visit www.licensewatch.com for more information or request a demonstration.

Key benefits

- Find out what you have installed quickly
- Reduce Vendor Audit Impact
- Inventory on Servers, Laptops and Desktops
- Rationalized, normalized and cleansed inventory data report
