

LicenseWatch Connector for Hyper-V

Controlling your Licenses in your virtualization solution

Windows
Hyper-V™

Start saving on your software license cost now and find out how LicenseWatch can help you. LicenseWatch is the only provider of Software Asset Management solutions that can effectively help organizations with Microsoft Hyper-V.

ABOUT LICENSEWATCH

LicenseWatch provides you with cost effective control and compliance.

KNOW WHAT YOU HAVE

Our leading technology quickly tells you what software you have installed, how it is used, and what licenses you have to support this.

QUICK TO IMPLEMENT

With LicenseWatch there are no lengthy and costly deployment projects. Typically installed and configured within one working day, you can quickly start gathering your software information.

EXTENSIVE REPORTING

The reporting capabilities in LicenseWatch provides with the necessary information about your assets with up to date accuracy. With a large number of pre-defined reports and a Report Wizard, well informed decisions can now be made. All reports can be exported to Excel or PDF format.

The architecture

The above illustration shows how LicenseWatch's (LW) Hyper-V service interacts with Hyper-V and the rest of LW. The Hyper-V connector is installed on a server with SCVMM (System Center Virtual Machine Manager). The SCVMM server is connected to one or several servers with Windows Server and Hyper-V installed. The Windows server needs the LWAgentService.msi installed to monitor the server.

Straight forward user interface

The user interface is straight forward: The administrator adds the (URL) address of the SCVMM Server to the Hyper-V settings in LicenseWatch and the LW Hyper-V service takes care of gathering informa-

tion about the Hyper-V servers and which virtual machines are running where.

Easy deployment

The LW Client is deployed on the virtual machines the same way as with a normal user PC/laptop. LW then takes care of linking the obtained data together wherever it is relevant. The LW Hyper-V service can be decoupled from the server running the LW website, as long as the service has access to the LW database (DSN) and direct connection with the SCVMM Server.
