LicenseWatch Quick Scan Service

Know what software you have installed - quickly.

The LicenseWatch Quick Scan is a service that will quickly provide you with an inventory of all the software installed on your network. The LicenseWatch Quick Scan will gather this information from all your workstations, servers, virtual servers and Citrix farms.

ABOUT LICENSEWATCH
LicenseWatch provides you with cost effective control and complance.

KNOW WHAT YOU HAVE
Our leading technology quickly tells you what software you have installed, how it is used, and what licenses you have to support this.

QUICK TO IMPLEMENT
With LicenseWatch there are no lengthy and costly deployment projects. Typically installed and configured within one working day, you can quickly start gathering your software information.

SERVICES AVAILABLE
• LicenseWatch Quick Scan
• Installation and Setup
• Maintenance
• Software Recognition Service
• Technical Support
• Guaranteed Warranty

Reports
With the reports delivered by the LicenseWatch Quick Scan you can quickly see what you have installed on your network and where.

Six easy steps
The LicenseWatch Quick Scan consists of six easy steps that usually can be completed in 30 days.

The first step is the installation of LicenseWatch Discovery on a (virtual) server in your network and agents will to be deployed on all your systems. Alternatively we can provide a system to plug into your network and then run without an agent to install on your clients. LicenseWatch Discovery will then start to collect all the software information from all your systems.

During the second step the License-Watch system will identify the installed software as applications, including suites or application families that will allow you to use up or downgrade rights of your software. All unidentified software will automatically be sent to the LicenseWatch Software DNA team. The LicenseWatch Software DNA team will then identify the software and return this information. After all* software has been identified, LicenseWatch Quick Scan will produce the deliverables and provide you with a comprehensive overview of your installed software.

Complete overview
The LicenseWatch Quick Scan provides you with a very comprehensive overview of where and what applications are installed, quickly giving you a complete overview of your complete software estate. The overview includes what software category, version and language.

Software audit
Do not wait for a software vendor to knock on your door and request a software audit. Give yourself the peace of mind and be able to provide Software Compliance Statements upon request with the LicenseWatch Quick Scan.

* all means software that is installed on 10 or more devices

• Know what software you have installed and where in just 30 days

• Support for both Windows and Intel Macintosh

• Software Compliance achieved in six easy steps

• Uncover unwanted installed software

LicenseWatch

SERVICE FEATURES AND BENEFITS

- Quickly discover what is installed in your network
- Get a full, categorized overview of the software estate
- Uncover unwanted software installations
- Helps to set realistic IT budget
- Allow internal invoicing based on software usage

INTEGRATION

When you are using Microsoft SCCM© 2012/2007 (any version) or Altiris Deployment Suite 6.5 or 7.0 we use the information already available directly with in LicenseWatch using our SMS/SCCM Connector or the Altiris Connector

VIRTUAL ENVIRONMENTS

Managing your software assets in a virtual environment can be a challenge. Not with LicenseWatch. Our Citrix and VMWare Connector will tell you exactly what you have and how it is used in these environments.

SOFTWARE DNA

Our Software DNA will help you recognizing the software in your environment. It will categorize the software found so you can choose on what software you want to spend your time.

SYSTEM REQUIREMENTS

- (Virtual) Windows Server 2003/2008/2012 with IIS, .NET 3.5 SP2 installed
- Access to a MS SQL Server 2005/2008/2012 database.
- LicenseWatch inventories Windows, Intel Macintosh machines.
- Intranet / intranet availability to machines that need to be monitored (TCP/IP port 80 open).
- Optional MS SCCM 2007/2012 or Altiris Deployment Solution V6.5 or V7.0.
